

One number for the year. From €10,000. Nothing per seat.

A custom ERP contour, built in three weeks on our stand and deployed to the client's own server once accepted and paid for. Below: the entry contour's first year for a distributor with forty people, fixed in the written scope before signature, excluding VAT.

The probe €0

Two days reading the live systems under a signed mutual NDA, ending in a written, fixed-price scope. Free; your requirements stay with you either way.

Contour one, order to invoice €10,000

Three weeks on our stand, then a real working day for your team. Deployment, your code and the foundation licence follow acceptance and full payment. Contours price €10,000 to €15,000; this is the entry one.

Running it, months seven to twelve ~~€6,000~~ €0

€1,000 a month after six included months. Monitoring, backups, patches, updates, email support, and changes within a monthly allowance; beyond it only on a written estimate you approve. Cancel any month. Signing by 30 November 2026, these six months are on us.

User licences, 40 people €0

There is no such line. The foundation licence is paid by the build fee and not counted per user.

Hosting Your provider

Our stand during the build, then your infrastructure, billed by your own provider: typically under €100 a month.

Implementation and consultants €0

The build fee is the implementation, with no partner behind us. Work outside the scope is priced in writing first.

Twelve months from signing ~~€16,000~~ €10,000

The guarantee is a clause, not a slogan

- **What is promised:** at the end of week three your team works a real day inside the system, on your data, doing the work named in the signed scope.
- **Who decides:** you do, against that scope document and nothing else.
- **If it is no:** everything you have paid returns in full within fourteen days; you keep an export of your data and your requirements.

What you hold at the end of year one

- Your code, assigned to you, in a repository your own account controls
- The foundation, licensed with no expiry and no user count
- Your servers and your data, in standard Postgres, exportable without asking anyone
- **Stop the monthly and everything keeps running.** Year two is €12,000 on it; without it, updates stop unless you take the updates-only plan

Compare with the quote on your desk: a seat-priced suite for forty people typically costs €50,000 to implement, the partner behind it comes back for about as much every year after go-live, **and the licence line grows every time you hire.**
